

"GEOSTAT Quebec City 2013", 26 May - 1 of June, 2013, Quebec City

The GEOSTAT Quebec city 2013 summer school is 8th in a series of summer schools organized by R and OS GIS developers and enthusiasts. GEOSTAT aims at PhD students and R enthusiasts in a range of environmental and GIS sciences, with a special focus on analyzing spatio-temporal gridded data in R and connected OS GIS software. The participants will learn how to import and organize space-time data i.e. time series of rasters and how to program statistical and geographical analysis using a combination of R and OS GIS functionality. The school will be hosted at the Faculty of Forestry, Geomatics and Geography, on the campus of Laval University, a few kilometers from the heart of Quebec City, Canada.

Registration deadline: 1st of February 2013.
